### Directions for use

#### 1. Substrate preparation

The substrate should be dry and free of grease, loose particles, dust, etc.

- Concrete imperfections should be repaired with DUOCRET polymer-modified mortar.
- Plastered wall may be repaired with UNICRET and UNICRET-FAST premixed mortars.
- For surface smoothing, STUCCOCRET powder filler should be used.

The substrate should be primed with the acrylic, micronized, water-based primer PRIMER-CLASSIC, thinned up to 50% with clean water. PRIMER-CLASSIC is also ideal to use for the stabilization of loose or crumbly substrates. As an alternative to PRIMER-CLASSIC, the acrylic water-based primer FLEX-PRIMER may also be used.

When it comes to dark paint colors (Base TR), it is recommended to apply a coat of ISOMAT PREMIUM COLOR tinted in a light shade of the same color tone on a base with higher opacity (e.g. Base P).

Surfaces stained by smoke, nicotine, exhaust fumes, water-soluble markers, pencils, etc. should be primed with the stain blocker BLOCK-PRIMER. Priming is not necessary on already painted surfaces as long as the old paint is sound.

## 2. Application

ISOMAT PREMIUM COLOR should be thoroughly stirred before use. It is applied as is or thinned 5-10% with clean water, in two coats using a roller, brush, or airless gun. The second coat is applied once the first one has completely dried.

## Coverage

ISOMAT PREMIUM COLOR covers approx. 12 m<sup>2</sup>/l per coat, on previously prepared surfaces.

## Packaging

ISOMAT PREMIUM COLOR is supplied in buckets of 0.75 l, 3 l and 10 l.
